Missing Values

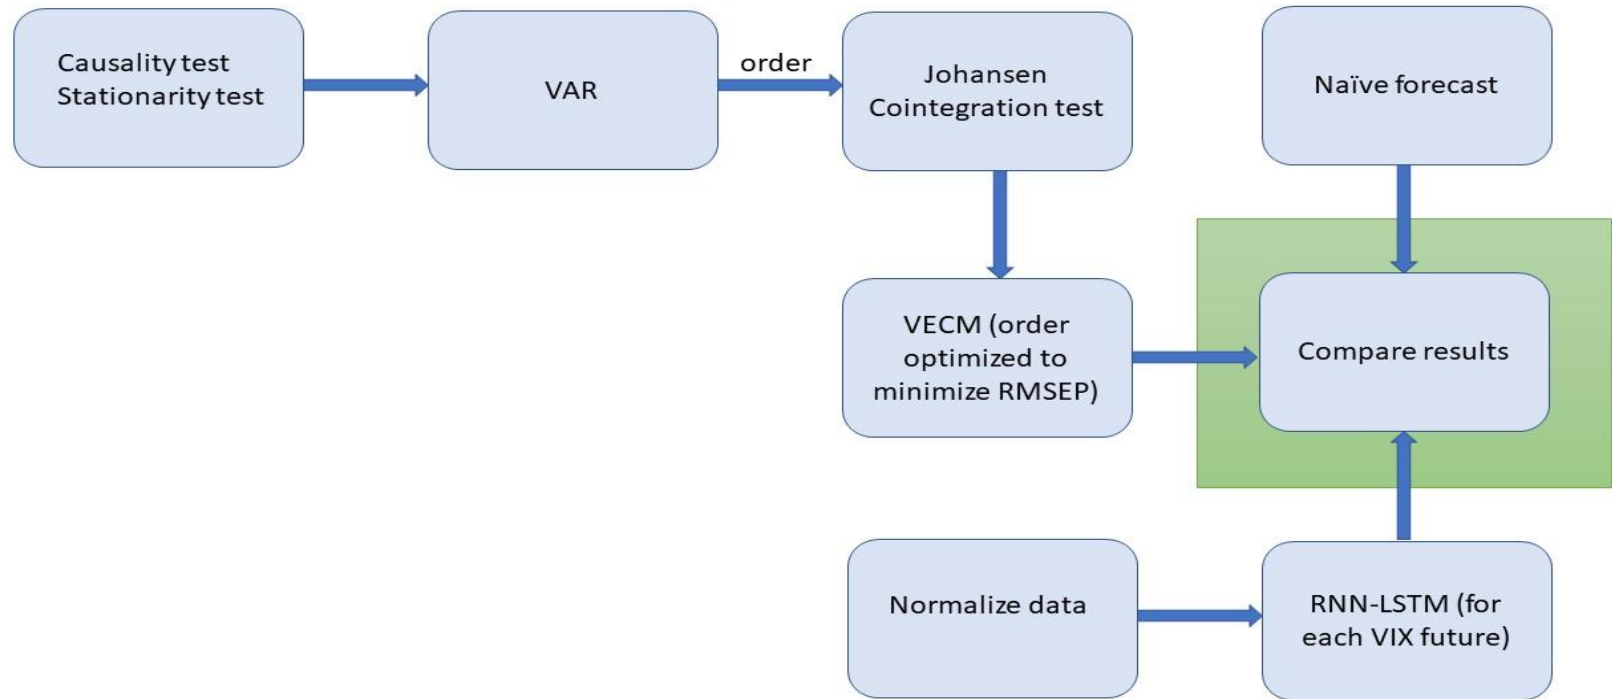

- VIXCM120 - 28 Null out of 2943 values
- VIXCM150 - 2434 Null out of 2943 values
- Solution - Linear Interpolation
- VIXCM150 Plots - Before & After Interpolation

RealVol, VIX, VIX Futures Plot

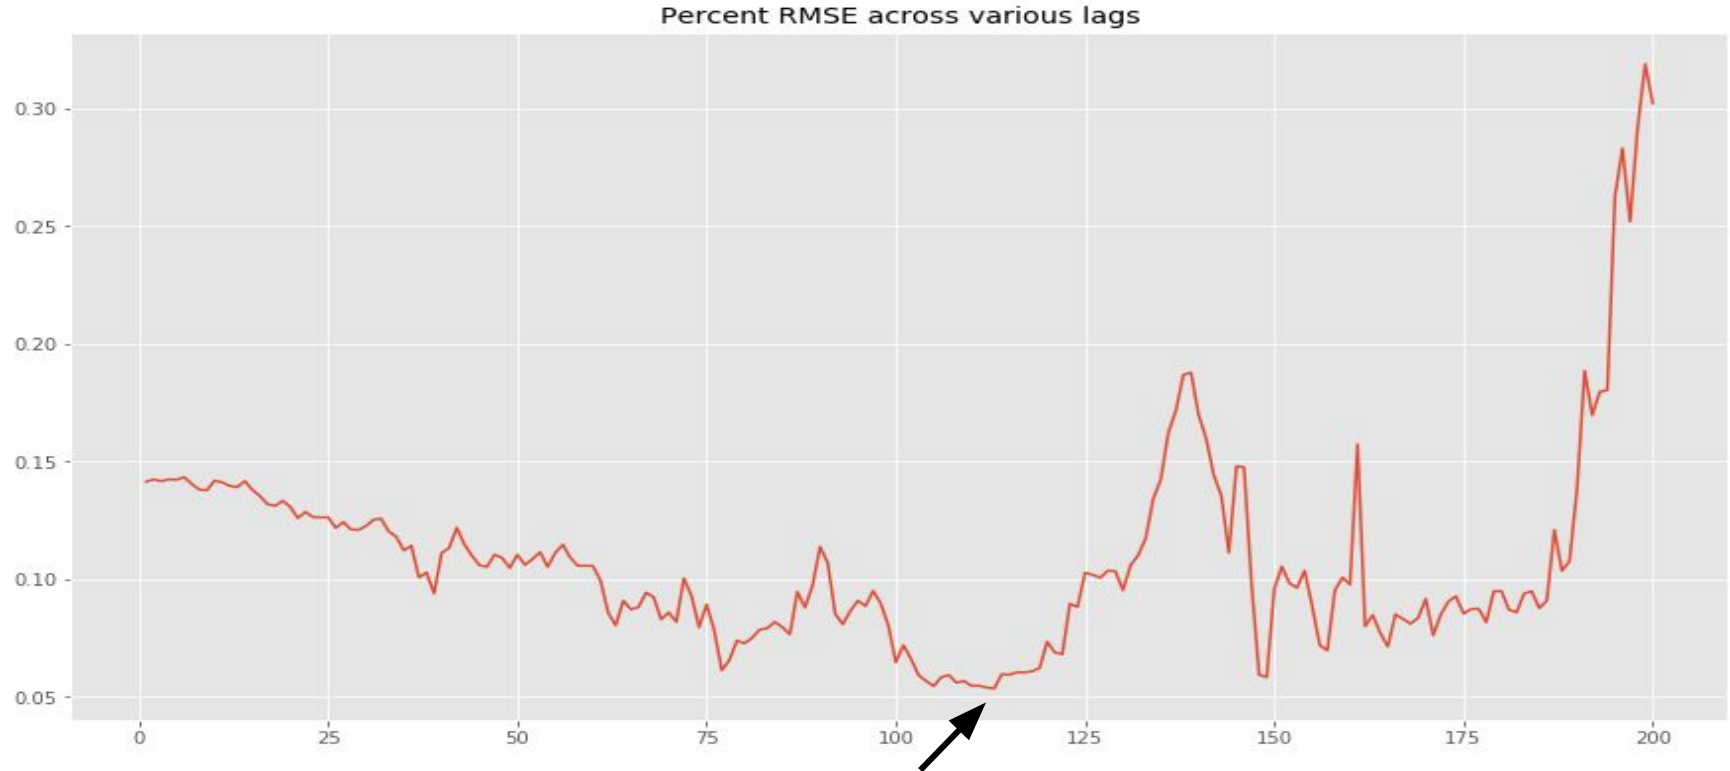

Roadmap

VECM Model

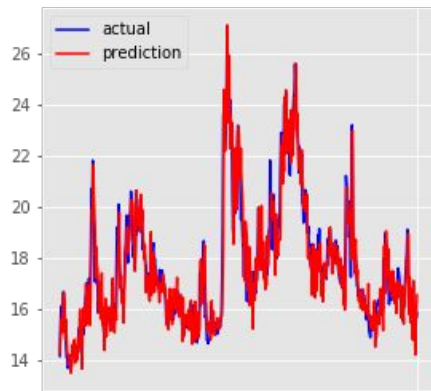

- Features - SPY_Ret, RealVol, VIX, VIXCM30, VIXCM60, VIXCM90, VIXCM120, VIXCM150
- Train-Test split: 80/20
- Optimized VECM model for lowest RMSEP
- **Metrics:** RMSEP
 - Penalizes extreme deviations more
 - Better comparison metric than raw error scores

Optimized VECM Model - lag 113

Naive Forecasting for Out Of Sample VIXCM150

RNN Forecast

- Features - Lagged SPY, RealVol, VIX, VIX Futures
- Train-Test split: 80/20
- Normalization
- 1 Layer - 50 nodes
- LSTM
- Adam Optimizer, learning rate - 0.00035, Epochs - 35

Model Comparison

Model	RMSEP (VIXCM30)	RMSEP (VIXCM60)	RMSEP (VIXCM90)	RMSEP (VIXCM120)	RMSEP (VIXCM150)
LSTM	0.0570	0.0420	0.0350	0.0300	0.0300
VECM model (order = 113)	0.0545	0.0387	0.0314	0.0273	0.0035
Naive model	0.1841	0.1717	0.1691	0.1709	0.1698

Results & Limitations

- 1- Day forecast models are accurate to the value
- Multi-day forecast models provide accurate trends not values through the first 200 forecasted days
- VECM model and RNN model performs better than Naive model
- More complex LSTM model might yield better results
- Interpolation is a useful way to handle sporadic null values such as VIXCM120 but not a useful way to handle consecutive missing values such as VIXCM150

Thank You!
